\$792

Samsung panel and tuner; excellent blacks; supports 24p.

Only 2 HDMI inputs; no 100Hz support; no DLNA or networking.

SPECIAL FEATURES

Onboard noise reduction

If, like many people, you can't really see the difference between a 100Hz and 50Hz television, the Wintal WLD32FHD full HD television is a great way of getting a quality full HD television at considerably less than a big brand equivalent.

The Wintal television is well built with quality components including a Samsung LCD panel and tuner and solid stylish piano black frame that looks like a big brand set. The remote control fits nicely in the hand with well spaced buttons and good tactile feedback. Nothing cheap and nasty here!

Picture quality is excellent with deep blacks and fine detail that is superior to even some name brand televisions. We tested the television with our Silicon Optix test disc and it displayed every pattern perfectly with especially good onboard noise reduction. The screen was evenly lit with excellent colour saturation even on the edges and corners. Sound was reasonable for a television of this

size although the bass could be a little stronger.

Setting up the television was very straightforward with the inbuilt analogue and digital tuners finding all available services (plus a few fringe analogue channels) the first time around.

Where you may notice a difference between the Wintal and the latest model Samsung or Sony (apart from the price) is when watching high action scenes (such as sports) as there is slight judder compared to our reference 100Hz Sony Bravia. The other thing the Wintal lacks are additional HDMI inputs (only two are provided) and support for enhanced television functions such as DLNA and network connectivity

and the ability to display photos and movies directly from a memory device.

If you just want a television that will provide you with an excellent picture and good sound you will be happy with this unit particularly as a second set.

David Neiger

Considering the price, this HDTV ranks up there with the big guys for value.
