- ⑤ Indicator of power Input.

Setting instruction

- 1. The switch is for bypassing RS232 signal or for firmware updating.

- 2. According to the silk prints nearby (“Program” for firmware update, “Normal” for RS232 transmission), change the switcher positions to set RS232 port’s function.

Update instruction

- ① The user should receive a Firmware burn package, containing all software needed for burning and updating the Firmware on the EEPROM.
- ② Connect an RS232 cable from RS232 port of unit to PC.
- ③ Power the unit.
- ④ Extract the zipped file from the burn package to a directory (e.g. C:\dir_name).
- ⑤ Browse to the directory (e.g. C:\dir_name\) and double click the batch file Update Source.bat (for TX) or Update Sink.bat (for RX).
- ⑥ A short description of the link created between the PC and the board appears on the screen, followed by the burn progress percentage report.
- ⑦ A second stage of verifying the content of the EEPROM follows, also with a progress percentage report.

For RS232 control signal transmission, just connect two RS232 cables to both RS232 ports of TX and RX, they work like an RS232 extension cable.
