Safety Precaution

The presence of this symbol is to alert the installer and user to the presence of uninsulated dangerous voltages within the product's enclosure that may be of sufficient magnitude to produce a risk of electric shock.

TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS DEVICE TO RAIN OR MOISTURE. DO NOT OPEN THE UNIT. REFER SERVICING TO QUALIFIED PERSONNEL ONLY.

- ❖ DO NOT apply power to the unit until all connections have been made, all components have been installed and all wiring has been properly terminated.
- ❖ DO NOT terminate, change, or uninstall any wiring without first disconnecting the unit's power adapter from the device.
- ❖ This device is supplied with the appropriately rated 12VDC power supply with the center pin positive. The use of any other power supply could cause damage and invalidate the manufacturer's warranty.
- ❖ The device should be installed in an environment consistent with its operating temperature specifications. Placement next to heating devices and ducts is to be avoided as doing so may cause damage. The device should not be placed in areas of high humidity.
- ❖ DO NOT cover any of the device's ventilation openings.
- ❖ If the device has been in a cold environment allow it to warm to room temperature for at least 2 hours before connecting power.

Package Contents

This package contains:

- ❖ One HDIP-800RJ
- ❖ One 12VDC 1.5A Power Adapter
- ❖ One installation / configuration manual

Inspect the package before starting installation to ensure there is no damage and all supplied contents are present. Contact your distributor or dealer should the device be damaged, or package contents are incomplete

Section 1 Introduction to HDIP-800RJ

ZyCast'S new HDIP-800RJ Professional HD IP Live Streamer allows users to send live RTMP/S streams to three (3) different URLs simultaneously. The Live Streamer accepts a HDMI, Component, or Composite video input and the unit is designed to deliver a rich HD/SD Streaming experience for its users. The HDIP-800RJ will also simulcast via RTP/UDP (Unicast/Multicast) to Local network.

The HDIP-800RJ HD Encoder enables high-definition streaming with resolutions up to 1080p over a LAN System providing a high-quality viewing experience for your customer.

Features

The HDIP-800RJ series features:

- * **Video resolution up to 1080p**
- * **HDMI, Component, Composite inputs with auto detection**
- * **Variable Bit Rate Control**
- * **H.264 Profile Control**
- * **AAC Video Codec**
- * **GUI for setup and control**
- * **GigE output port**
- * **Front panel LED Status Display**

Fan Cooled	Internal
Power Supply	12VDC 1.5Amp
Consumption	5W Typical
Dimension	1RU, Housing: 236mm x 145mm x 35mm
Language	English

****Specifications subject to change without prior notice***

Section 2 Installation

System Installer must adhere to Article 820-40 of the NEC that provides guidelines for proper grounding and specifies that the cable ground shall be connected to the grounding system of the building, as close to the point of cable entry as possible.

Unpacking and Inspection

Each unit is shipped factory tested. Ensure all items are removed from the container prior to discarding any packing material.

Thoroughly inspect the unit for shipping damage with particular attention to connectors and controls. If there is any sign of damage to the unit or damaged or loose connectors contact your distributor immediately. Do not put the equipment into service if there is any indication of defect or damage.

Hardware Installation and Connections

It is highly recommended that quality cables and connectors be used for all video and audio source connections.

1. Connect the media source (Video Camera, Satellite STB, Media player, or other media device) to the HDIP-800RJ via HDMI, Component, or CVBS (Composite) cable.
2. Connect the HDIP-800RJ to the network.
3. Plug the power adapter to the device and power up.
4. Network Setup

Limitations

1. The HDIP-800RJ can stream live up to 3 CDNs & 3 UDP/RTP streams at once.

Front View

Buttons/LEDs	Description
Reboot Button	Reboots the device (unsaved settings will be lost)
RST/UPG Button	<p>To reset all the settings of the device to factory default:</p> <ol style="list-style-type: none"> 1.Press and hold the RST/UPG button and boot-up the device 2.Hold the button until CFG led to flashes 10 times (about 10 seconds) 3.After the CFG led stops flashing release the button <p>To upgrade firmware using the USB port:</p> <ol style="list-style-type: none"> 1.Plug-in the USB drive with the upgraded firmware image (“hdip_upg.img”) 2.Press and hold the RST/UPG button and boot-up the device 3.USB led will flash while copying the image from USB drive (about 3~5 seconds) 4.Wait until the CFG led stop flashing 5.Release the RST/CFG button and wait for the device to reboot and upgrade the firmware (about 1 minutes)
PWR	LED ON indicates Power is ON
CFG	LED ON indicates device is in configuration mode
USB	LED ON indicates USB drive is mounted
Video	LED ON indicates device is encoding video using H.264, flashing when free run
Audio	LED ON indicates device is encoding audio using AAC+44.1k, others shows LED OFF
Stream 1	LED ON indicates RTMP1 in connection
Stream 2	LED ON indicates RTMP2 in connection
Stream 3	LED ON indicates RTMP3 in connection

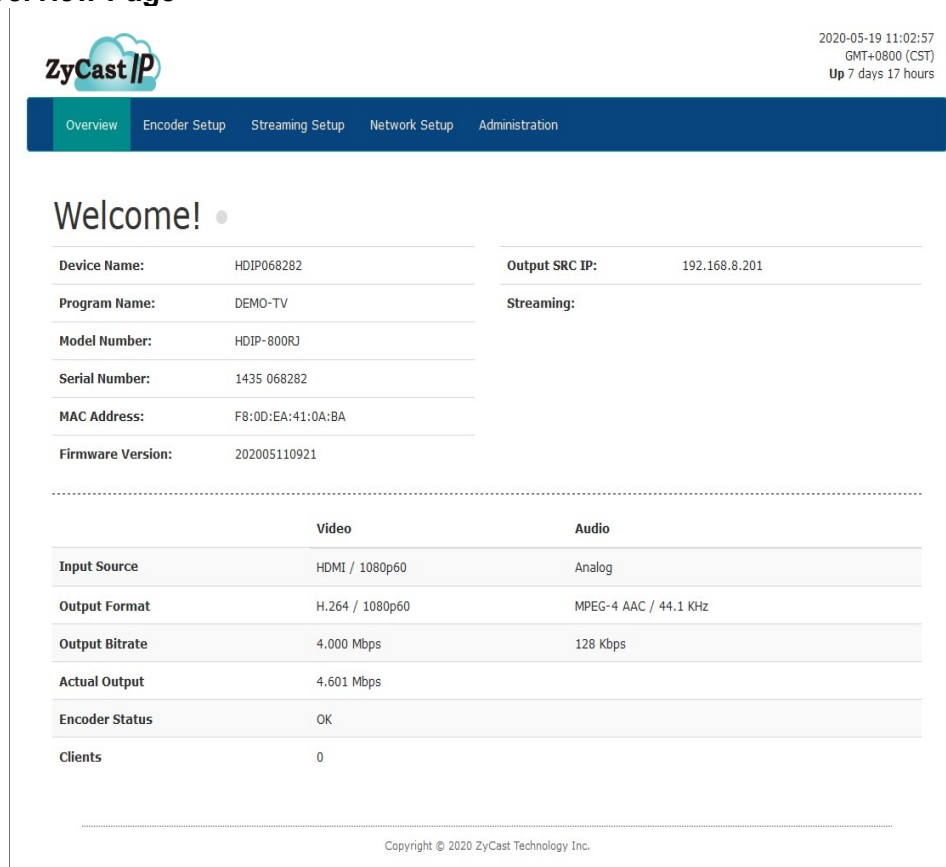

Procedure to connect to the Streaming Server via the Network port

Factory Default IP: 192.168.1.9

1. Connect a standard CAT6e cable from HDIP-800RJ Network port directly to a PC.
 - Connect using an ethernet cable to the device's remote setup port either directly to a laptop or PC or connect the device into the network.
2. Modify your PC/Laptop IP address to 192.168.1.11.
 - Confirm your device is on the same IP scheme as the HDME-I/P-3's default IP.
3. Enter '192.168.1.9' into your web browser.
 - Open a web browser such as Chrome, Firefox. Enter the devices default IP address in the browser.

Section 3 Configuring the HDIP-800RJ

Overview Page

The screenshot shows the ZyCast IP web interface. At the top right, the date and time are 2020-05-19 11:02:57 GMT+0800 (CST), and the device has been up for 7 days 17 hours. The navigation menu includes Overview, Encoder Setup, Streaming Setup, Network Setup, and Administration. The main content area displays a 'Welcome!' message and a table of device information:

Device Name:	HDIP068282	Output SRC IP:	192.168.8.201
Program Name:	DEMO-TV	Streaming:	
Model Number:	HDIP-800RJ		
Serial Number:	1435 068282		
MAC Address:	F8:0D:EA:41:0A:BA		
Firmware Version:	202005110921		

	Video	Audio
Input Source	HDMI / 1080p60	Analog
Output Format	H.264 / 1080p60	MPEG-4 AAC / 44.1 KHz
Output Bitrate	4.000 Mbps	128 Kbps
Actual Output	4.601 Mbps	
Encoder Status	OK	
Clients	0	

Copyright © 2020 ZyCast Technology Inc.

The Overview page of the HDIP-800RJ offers a quick status of the device.

On the Welcome Screen, we have added a tool to help the installer locate a unit in a rack or headend. Press the LED ON button (shown below). This will cause the CFG LED light to flash continuously for the installer to identify and locate the HDIP-800RJ. To turn off, simply press the LED tool again.

Welcome!

Device Name:	HDIP068282
Program Name:	DEMO-TV
Model Number:	HDIP-800RJ
Serial Number:	1435 068282
MAC Address:	F8:0D:EA:41:0A:BA
Firmware Version:	202005110921

Login User and Password

User Name: **admin** Default Password: **Admin123**

Once the Welcome Page is displayed select the Encoder Setup tab and the below Login “Authentication Required” screen will be presented. Enter the User Name and Password then click Login.

Note: User Password can be changed – **See Administration Page.**

Section 4 Encoder Setup

Use the Encoder Setup page to Set Video Input Type, Video Output Type, Video Output Resolution, Framerate, Profile, Video Bitrate, and other encoder parameters.

2020-05-19 11:06:07
GMT+0800 (CST)
Up 7 days 17 hours

Saving Changes

Save any/all changes made on the Encoder Page. Leaving any Setup page without using the **'Save and Confirm'** button will cause the encoder to keep the previous saved settings.

Video Control

Video Input: Select Video Input.

Setting the device to **Auto Detect** allows the Encoder to automatically recognize which video source the user is using.

Selecting HDMI, Component, or Composite “locks” the encoder to detect only the input type selected.

Note: We recommend using the Factory default 'Auto Detect.'

Video Output: Select Video Output.

The HDIP-800RJ outputs High Quality HD/SD video streams in H.264 and H.264 CBR formats.

Video Output Format: Factory Default: H.264 CBR

Resolution: Select Resolution required.

Resolutions: 480i/480p/576i/576p/720p/1080i/1080p (for 1080i/p – select “Same as Input”)

Note: The HDIP-800RJ can scale down the input video content.

Frame rate: Select Frame rate required.

- ✓ Same as Input
- NTSC: 30 fps, PAL: 25 fps
- NTSC: 15 fps, PAL: 12.5 fps
- 10 fps
- NTSC: 7.5 fps, PAL: 6 fps

The HDIP-800RJ also offers Frame rate control.

H.264 Profile

The HDIP-800RJ offers Profile if **H.264** is the Video Output type.

H.264 Profile: Select H.264 Profile as required. (Factory Default: Default)

- ✓ Default
- BASE
- MAIN
- HIGH

Set Video Bitrate: HD / SD

H.264 Video Bitrates

HD: 2 ~10 Mbps (default- 4 Mbps)

SD: 1 ~ 4 Mbps (default- 4 Mbps)

HD Bitrate:	<input style="width: 95%;" type="text" value="4.000"/>	↕	Mbps (2~10)
SD Bitrate:	<input style="width: 95%;" type="text" value="4.000"/>	↕	Mbps (1~4)

Set Video Bitrate or use the default settings as required.

Aspect ratio: Select Aspect ratio

- 4:3
- ✓ 16:9

Select: 16:9 (default) or 4:3

Audio Control

Audio Input: Select Audio Input

Auto detect

Analog

Setting the device to **Auto Detect** allows the Encoder to automatically recognize which Audio Input source the user is using.

Audio Bitrate: Select Audio Bitrate

96 Kbps
✓ 128 Kbps
192 Kbps
256 Kbps
384 Kbps

Use the Drop-Down tool to Select the Audio Bitrate required.

Color Control

Modify Brightness/Contrast/Saturation/Hue

Brightness:	128
Contrast:	128
Saturation:	128
Hue:	128

Change the above settings as required on the Encoder.

Factory Default: 128

SAVE AND CONFIRM ALL CHANGES MADE ON THE ENCODER PAGE

Save and Confirm	Cancel
------------------	--------

'Save and Confirm' the changes made on the Encoder Page.

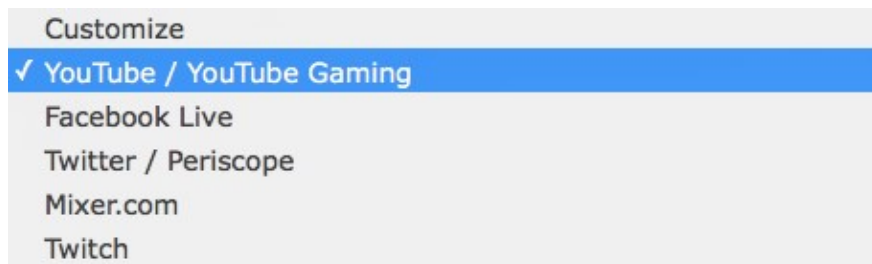

Note: To reset all changes made or saved go to the Administration Page and select '**Reset to Default**'.

***Leaving the encoder page without saving changes will cause the previous settings to be used.**

Section 5 Streaming Setup

The HDIP-800RJ was designed to allow the user to stream simultaneously to 3 CDN's at once.

1. **Select** from the drop-down tool for Stream Service and select either a preset Stream service or a "custom" (CDN) not listed or shown in the drop down.

Note: Select Custom if your CDN is not listed in the drop-down list above.

2. **Copy, paste, and enter** the Stream key for your stream.

Stream key:

3. Select "Add" once the Stream Key has been added.
The added URL will be displayed in the RTMP List.
4. **SAVE AND CONFIRM** all changes made on the Streaming Setup page.

To remove a stream from the RTMP list simply select the stream and click '**Remove**'.

Facebook, Facebook Live, Twitter/Periscope, Twitch, YouTube, Livestream, and all other entities mentioned are registered trademarks of the listed entities.

Section 6 Broadcasting Configuration

Broadcasting

Steps to add multicast / unicast streams: 1 thru 6

Protocol: UDP Multicasting **1** Select Protocol type from drop down

Destination IP: **2** type address here: example: "224.1.1.1"

Destination Port: 1234 **3** put port address here

Multicast TTL: 4 **4** skip as 4 should be a good TTL #

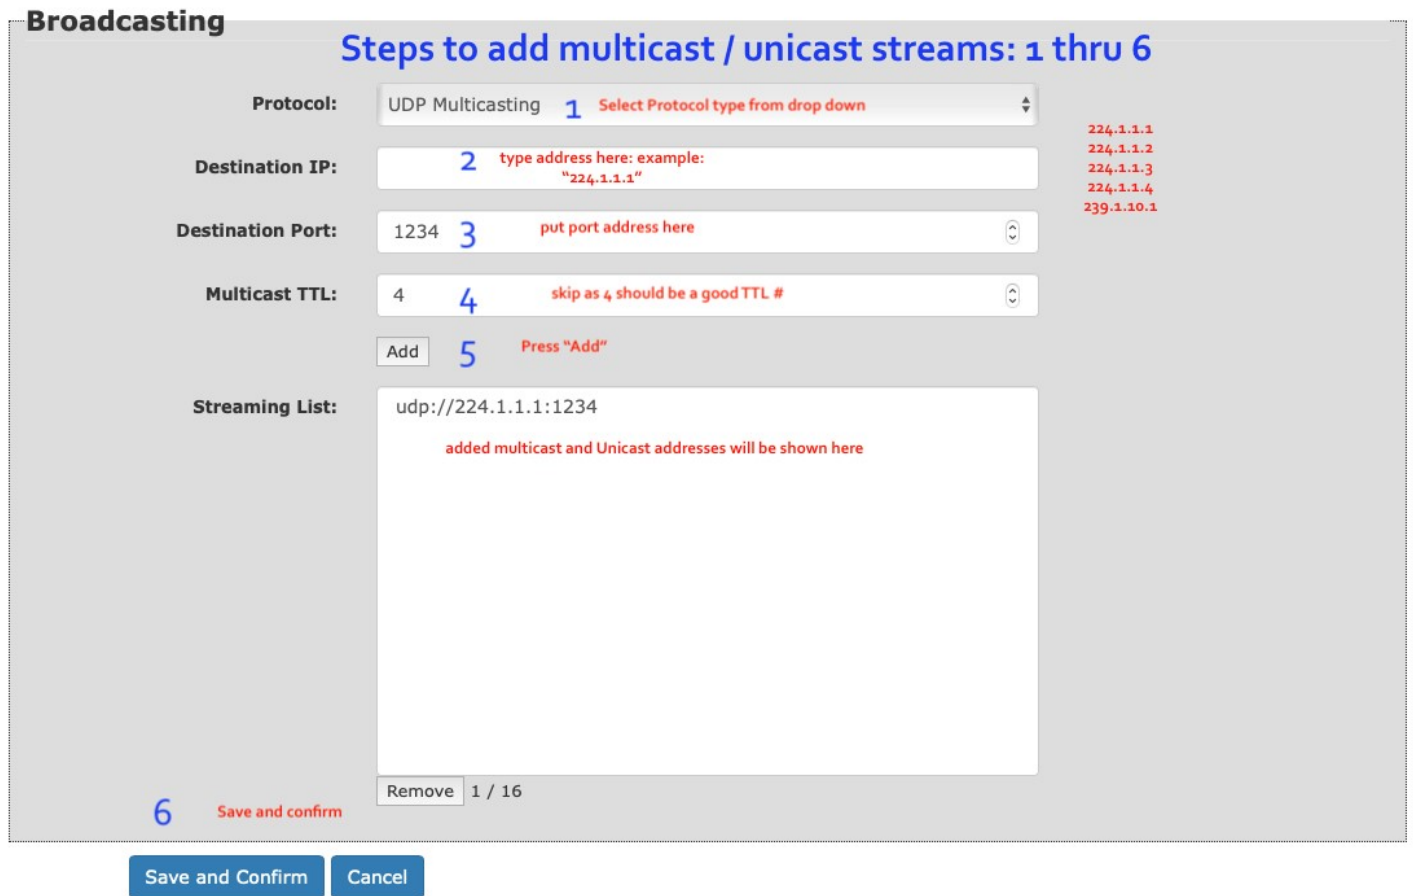

Add **5** Press "Add"

Streaming List: udp://224.1.1.1:1234
added multicast and Unicast addresses will be shown here

Remove 1 / 16

6 Save and confirm

Save and Confirm Cancel

The image shows a web-based configuration interface for broadcasting. It features a series of input fields and buttons, each accompanied by a numbered instruction. The 'Protocol' field is a dropdown menu set to 'UDP Multicasting'. The 'Destination IP' field contains a text input with a placeholder example. The 'Destination Port' field has a numeric input set to '1234'. The 'Multicast TTL' field has a numeric input set to '4'. Below these fields are 'Add' and 'Remove' buttons. The 'Streaming List' is a large text area containing the URL 'udp://224.1.1.1:1234'. On the right side, there is a list of IP addresses: 224.1.1.1, 224.1.1.2, 224.1.1.3, 224.1.1.4, and 239.1.10.1. At the bottom, there are 'Save and Confirm' and 'Cancel' buttons.

Section 7 Network Configuration

GMT+0800 (CST)
Up 7 days 17 hours

Overview Encoder Setup Streaming Setup Network Setup **Administration**

Administration

Reboot Device

Reset to default

Reset configuration to factory default.

Backup and Restore Configuration

Configurations: Backup and download current configuration settings to a local file.

Restore:

Upload the pre-saved configuration settings to device.

Firmware Upgrade

Model Number: HDIP-800RJ

Serial No.: 1435 068282

Firmware Ver.: 202005110921

Firmware Image:

To upgrade the device's firmware, select the required firmware image file then upload it to the device.

Change Password

CAUTION: The new password must contain:

- 6~8 characters
- At least one digit
- At least one uppercase character
- At least one lowercase character

Old Password:

New Password:

Retype New Password:

After changing the password use the Save and Confirm button. The browser will redirect to the Overview page allowing the user to use the new password.

Copyright © 2020 ZyCast Technology Inc.

Reboot Device

Click the 'Reboot Device' button to reboot the device from within the GUI.

Note: The Streamer can be rebooted using pressing the 'Reboot' button on the front of the device. All unsaved changes will be lost.

Reset to Default

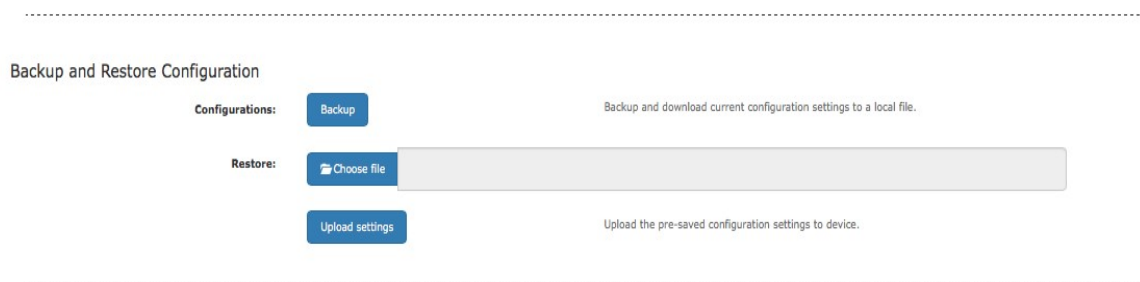

Click the 'Reset to Default' button to disregard any parameter changes made to the device.

Note: Device settings will revert to factory default settings.

Backup and Restore Configuration

Saving your configuration files

We highly recommend you save your encoder configuration files. Simply **Click** the “**Backup**” button and the config files will be saved to your computer.

A “**config.cfg**” file will be created. Locate the file My Computer> C Directory > Documents and Settings> User>My Documents>Downloads>configs.cfg.

Backup

We highly recommend saving your device’s setting.

1. Select Administration tab.
2. Select backup from the menu.
3. Locate and name file for future use.

Restore

1. Select Administration tab.
2. Select “Choose file” menu.
3. Locate the required file to be imported.
4. Select “Upload settings” to import the selected file into the device.

Note: backup can be imported to assist in setting up new or multiple devices onsite.

Remember to save and backup any and all changes.

Firmware Upgrade

Use the Firmware upgrade function to import new FW versions.

1. Select Administration tab.
2. Select “Choose file” menu.
3. Locate the required image file to be imported.
4. Select “Upload image” to import the selected file into the device.

Change Password

Change Password

CAUTION: The new password must contain:

- 6~8 characters
- At least one digit
- At least one uppercase character
- At least one lowercase character

Old Password:

New Password:

Retype New Password:

After changing the password use the Save and Confirm button. The browser will redirect to the Overview page allowing the user to use the new password.

Change Password:

Use the Change Password section to change or modify the device’s password as desired. Remember to **Click** ‘*Save and Confirm*’ button to save new password.

Section 9 Streaming Examples

Streaming Setup Example: YouTube Live Streaming

Step 1: On the Streaming Setup page **select** “YouTube”

RTMP Client

Stream Service: Customize
YouTube
 Facebook Live
 Twitter / Periscope
 Mixer.com
 Twitch

Server:

URL:

Stream key:

RTMP List: YouTube

1 / 3

RTMP Client

Stream Service: Customize
✓ YouTube / YouTube Gaming
 Facebook Live
 Twitter / Periscope
 Mixer.com
 Twitch

Server:

URL:

Stream key:

RTMP List:

0 / 3

Step 2:

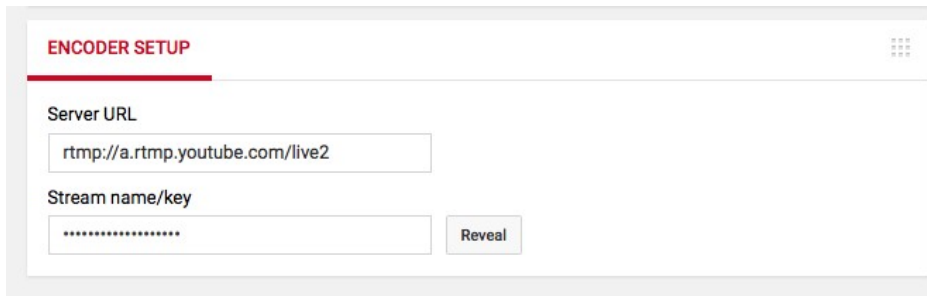

Open your Youtube Live DashBoard on any browser.

Step 3:

Select 'Live Streaming' Stream Now.

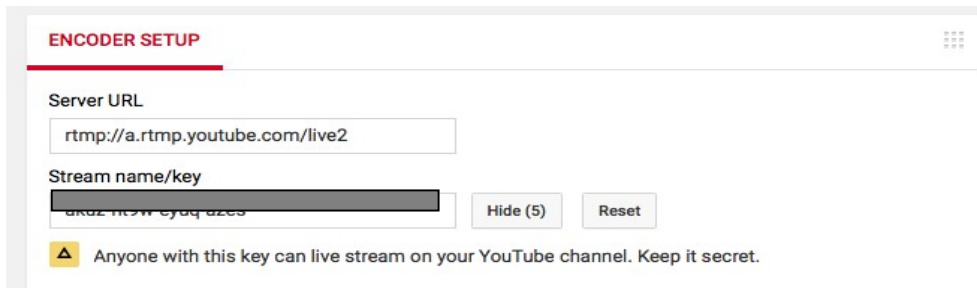

Step 4: Scroll Down to locate Encoder Setup.

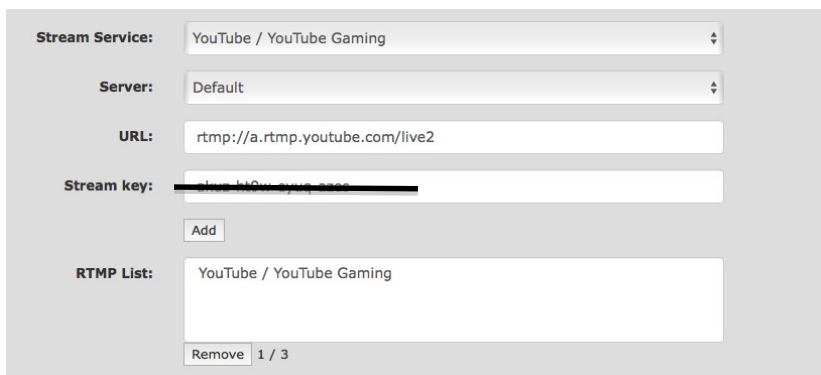

The image shows a web interface titled "ENCODER SETUP". It contains two input fields: "Server URL" with the value "rtmp://a.rtmp.youtube.com/live2" and "Stream name/key" with a masked value "*****". A "Reveal" button is located to the right of the "Stream name/key" field.

Step 5: Select Reveal 'Stream name/key'.

The image shows the "ENCODER SETUP" form with the "Stream name/key" field now revealed, showing the key "akoz-h5w-eydq-uzes". There are "Hide (5)" and "Reset" buttons next to the field. A warning message below the field states: "Anyone with this key can live stream on your YouTube channel. Keep it secret."

Step 6: Copy and Paste Stream Key into HDIP-800RJ Stream Key IO field.

The image shows a configuration form for a stream service. It includes dropdown menus for "Stream Service" (set to "YouTube / YouTube Gaming") and "Server" (set to "Default"). There are input fields for "URL" (containing "rtmp://a.rtmp.youtube.com/live2") and "Stream key" (containing the key "akoz-h5w-eydq-uzes"). Below the "Stream key" field is an "Add" button. At the bottom, there is an "RTMP List" section showing "YouTube / YouTube Gaming" and a "Remove 1 / 3" button.

Step 7: Click Add to add the YouTube Live Stream to the RTMP List.

Step 8: Select Save and Confirm.

Note: You can check the Overview page to see the status of the stream.

Streaming Setup Example: Twitch Streaming

Step 1: On the Streaming Setup page select “Twitch”

RTMP Client

Stream Service: Twitch

Server: US East: New York, NY

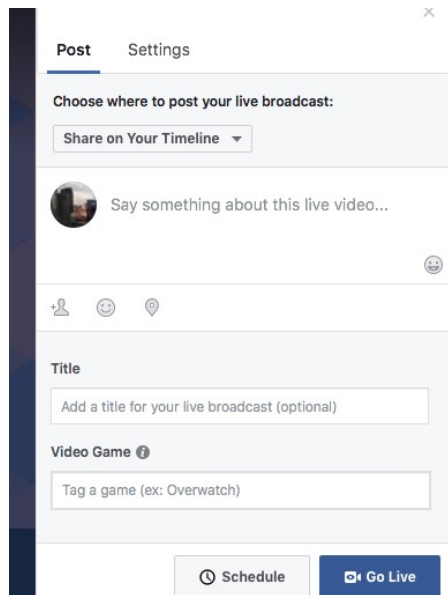

URL: rtmp://live-jfk.twitch.tv/app

Step 2: Select the local Twitch Server for your location.

Step 3: Open the Twitch Dashboard.

Step 4: Select Setting then Stream Key

Step 5: Select Show Key then Click “I Understand.”

Note: Users who stream temporarily will need to remove the Facebook RTMP from the list and acquire a New Stream key before streaming live again.

Custom Streaming

Streaming Setup Example:

The HDIP-800RJ can stream to almost any CDN. Those CDN's not listed can be manually added using the Customize Stream Service Type.

Step 1: On the Streaming Setup page **select** "Customize"

Step 2: **Copy and Paste** the Stream URL int URL IO field.

Step 3: **Copy and Paste** the Stream Key.

Step 4: **Click Add** to add the Stream to th RTMP List.

Step 5: **Select** Save and Confirm.

Stream Service:

Server:

URL:

Stream key:

RTMP List:

- YouTube / YouTube Gaming
- Twitch (US East: New York, NY)
- Customize

3 / 3

The above example used LiveStream RTMP Ingest URL.

Private Address Ranges, IPv4

Private IPv4 addresses are addresses set aside by the IANA (Internet Assigned Numbers Authority) for use within networks that will not directly communicate or not be seen by the internet. These private addresses cannot be used on the Internet or be used to communicate with the Internet. ISP's filter out and delete packets using private IP addresses. Any organization that uses private IP addresses on devices that communicate with the internet must use a device that performs Network Address Translation.

Anyone can use private addresses and they are not required to seek permission to use them. Again, networks using private IP addresses cannot communicate directly with the internet.

There are three blocks of addresses that are set aside by IANA for use in private internets and are not publicly routable on the global internet:

Private Class A Range: 10.0.0.0 - 10.255.255.255
Private Class B Range: 172.16.0.0 - 172.31.255.255
Private Class C Range: 192.168.0.0 - 192.168.255.255

It is important to note that only *some* of the 172.xx.xx.xx and the 192.xx.xx.xx address ranges are designated for private use. The remaining addresses are public and can be routable via the global Internet.

More information regarding private addresses can be found at <http://www.iana.org> and <https://www.arin.net>.
