

XJ-300ST Amplifier

Product Release

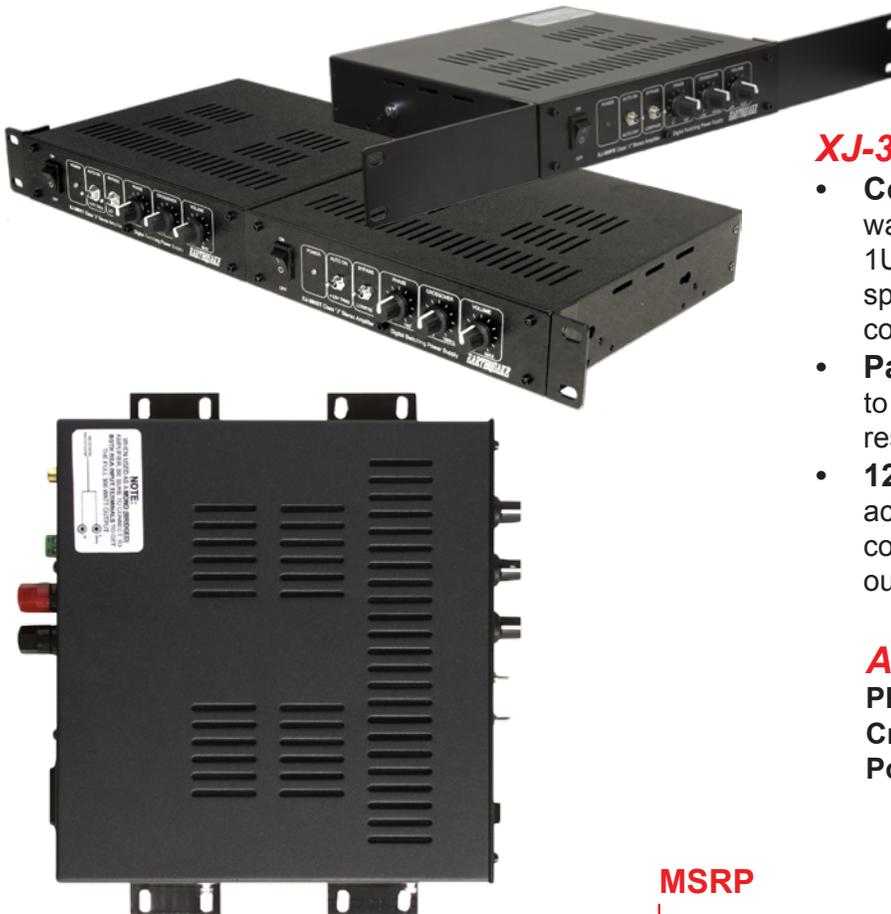

The newly updated XJ-300ST amplifier from Earthquake Sound packs more power and maintains more flexibility than any other amplifier; no amplification task is beyond its capability. With its unimposing miniature size and unbelievable amount of cool running power this highly powerful and compact class J amplifier is an installers go to dream.

Keeping flexibility and convenience in mind, Earthquake has kept their patented EQ Interlock design so two amplifiers can be clicked together resulting in a 4-channel amplifier while using only 1U of rack space!

With endless configuration scenarios, the XJ-300ST amplifiers can be used as mono (bridged) amplifiers, 2.1 channel amplifiers, 2-channel amplifiers 4/8/12 and 16-channel amplification with industry leading power density and efficiency. Approaching 99% efficiency, the XJ amp never gets hot and can be placed in a tight rack with components on all sides. At only one rack U high and half a rack in width this is an amazingly convenient and powerful achievement.

XJ-300ST Features:

- **Compact Design** allows the amplifier to be wall or rack mounted while occupying only 1U of rack space. Providing you with more space to safely and conveniently place other components
- **Patented Interlock Design** allows you to easily connect two XJ-300ST amplifiers resulting in a 4 channel amp
- **12V Trigger and Auto Signal Sensing** acts as a standby mode allowing you to conveniently power the amp through an outside source

Additional Features:

Phase Adjustment: 0 - 180°

Crossover: 50 - 160Hz

Power Handling: 8-Ohm: 2 x 110 WRMS

4-Ohm: 2 x 170 WRMS

MONO BRIDGED:

8-Ohm: 170 WRMS

4-Ohm: 300 WRMS
